

Origin Business Intelligence

Enabling Police Forces to
make informed decisions

Maximising your business understanding through insight and data discovery

Empowering users with the building blocks for reports enables them to ask the right questions. This capability to chain pre-built or custom built reports together, whilst making use of drill-downs, allows business questions to be answered quickly and effectively.

Understanding your resources

Origin Business Intelligence (Origin BI) is the development of an analytical data-discovery solution which enables a Police Force to understand how efficiently they are using resources, and how much they are costing.

Origin BI is designed to provide a Police Force with the capability of surfacing critical data for planning and decision making via the vast array of data held in disparate IT systems. Focusing on analysis trends to highlight areas of potential cost saving, in key areas such as Overtime and Absence management.

Core components

Advanced BI Capabilities enable the identification and visualisation of hotspots and trends in data not apparent via more traditional reporting.

Common BI Repository of Origin data optimised for multi-dimensional ('slicing and dicing') and 'what if' analysis. Automatically refreshed to maintain accuracy.

Joined up data comparison and analysis across key business functions e.g. Absence data alongside overtime data.

Pre-built Origin BI Dashboards providing 'out of the box' analyses delivering immediate insight into data across the Origin suite.

Pre-built Origin BI ETL routines to Extract the source transaction data from the Origin system, Transform and optimise it for BI reporting and Load it into the common BI repository.

Capability and Services to Extend the BI Repository to integrate other Force data e.g. Crime and Intelligence, Command and Control with Origin ERP data and surface patterns in related data across the entire Force operations.

Benefits

The benefits for Police Forces include the following:

- ❑ Greater control over budget forecasting and resource planning
- ❑ Quick answers to complex business questions
- ❑ Advanced multi-dimensional graphs, dials and charts

An Origin BI implementation is a key enabler to real organisational insight.

“ Previously, even gathering data about overtime was difficult, let alone being able to analyse it in context. Now we are in a position where we can see for example, whether there is a link between high levels of sickness absence and overtime. ”
